The next generation of Baryta Photographique, offers photographers and printers the opportunity of creating a photograph with the true look and feel of a traditional darkroom print with improved handling and finishing characteristics.

Baryta Photographique II has a true 100% barium sulphate layer (baryta) which offers exceptional contrast and detail as well as a wide colour gamut. The product has an extremely high D-Max (black point) to produce black and white images with depth and clarity and colour images with vibrancy and intensity. The new generation product has a more structured surface aspect which is reminiscent of the traditional fibre-based darkroom papers and a fine satin finish.

With excellent handling characteristics, Baryta Photographique II can be used in a wide range of applications and is offered in sheets and rolls up to 60" wide.

Testimonials

For the Baryta Photographique II product

[See gallery](#)

Robert Rodriguez JR

"The new Baryta Photographique II has the same beautiful qualities I've always loved about Baryta - silky smoothness, rich blacks, and wonderful color depth- and the new version improves on that in a subtle and nuanced way. If you loved the original Baryta, you'll love version II even more. And if you've never tried it,

it's definitely worth consideration for those images where you want to make a powerful statement with a look reminiscent of a traditional dark room print. Version II is a step forward in every way for sure."

Featured Recommendations

- Platine Fibre Rag

Platine Fibre Rag

Canson® Infinity Platine Fibre Rag is the combination of the premium 100% cotton Platinum paper that Canson has supplied for many years to the original Platinum and Platine photographic market, with the latest microporous coating, making the traditional darkroom paper now available for your digital printing.
